

PERSONAL MEMORY CLOSED LOOP

ARCA

The executable memory layer **between you and the world.**
It remembers everything, acts on what it can, and asks you only when it matters.

WHY I BUILT THIS

This semester I was running a startup,
taking classes, juggling **a dozen projects.**

I didn't hit a wall because I couldn't do the work. I hit it because I couldn't **hold it all in my head** — too many people, too many promises, too many open threads.

I needed a second brain that didn't just remember — it **closed the loop**. So I built one.

THE PROBLEM

We don't **do** our work.
We spend the day **managing** it.

57% — communicating about work

43% — actually doing it

Microsoft 365 telemetry · two-thirds say they lack the time & energy for the job they were hired for.

It's not a lack of notes. Every piece of work has to pass through your head to get closed.
We call that the **Context-to-Completion Gap** — and right now, that gap is filled with **you**.

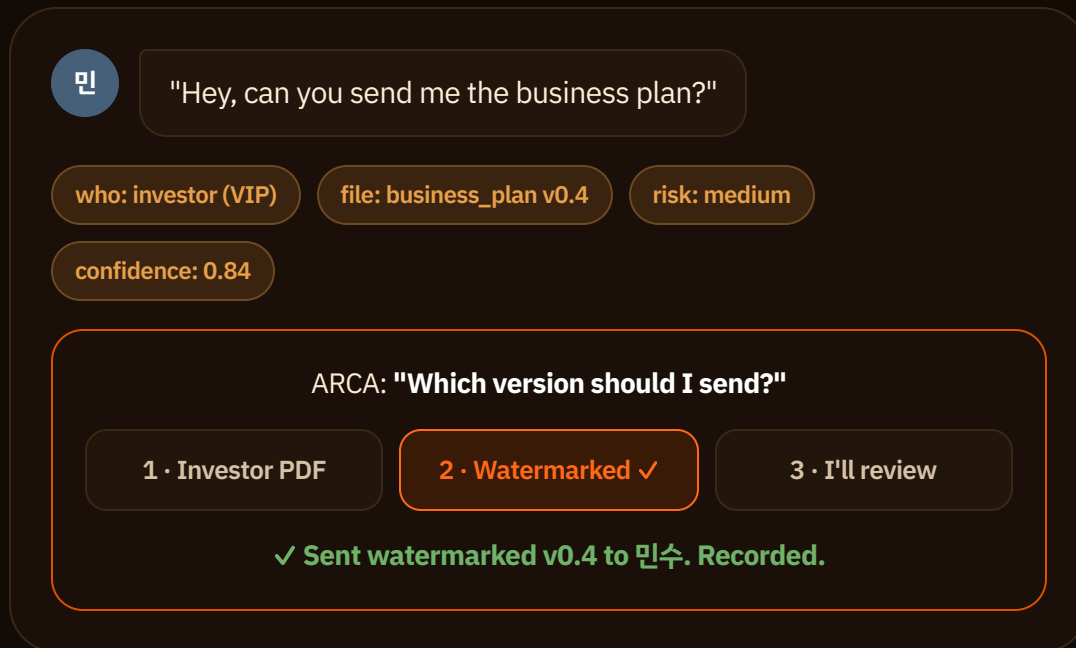

ARCA closes the loop.

Everything flows in, gets remembered, acted on, and recorded back
— a loop that never drops what matters.

HOW IT WORKS — A REAL EXAMPLE

A Slack message comes in. You barely lift a finger.

민 "Hey, can you send me the business plan?"

who: investor (VIP) file: business_plan v0.4 risk: medium

confidence: 0.84

ARCA: "Which version should I send?"

1 · Investor PDF 2 · Watermarked ✓ 3 · I'll review

✓ Sent watermarked v0.4 to 민수. Recorded.

- 1 A request **arrives** — from anywhere.
- 2 ARCA **understands** it — who, what file, how risky.
- 3 It asks you **the one thing** that needs your judgment — 1·2·3, with a recommendation.
- 4 You **tap once**. It's done — and remembered.

NOT A TOOL — A FRIEND

One companion, alive on every device you own.

"Handled 3 things while you were in your meeting ✓"

MacBook

"Send the watermarked plan to 민수?"

iPhone

"10 min till your call — here's the brief."

Apple Watch

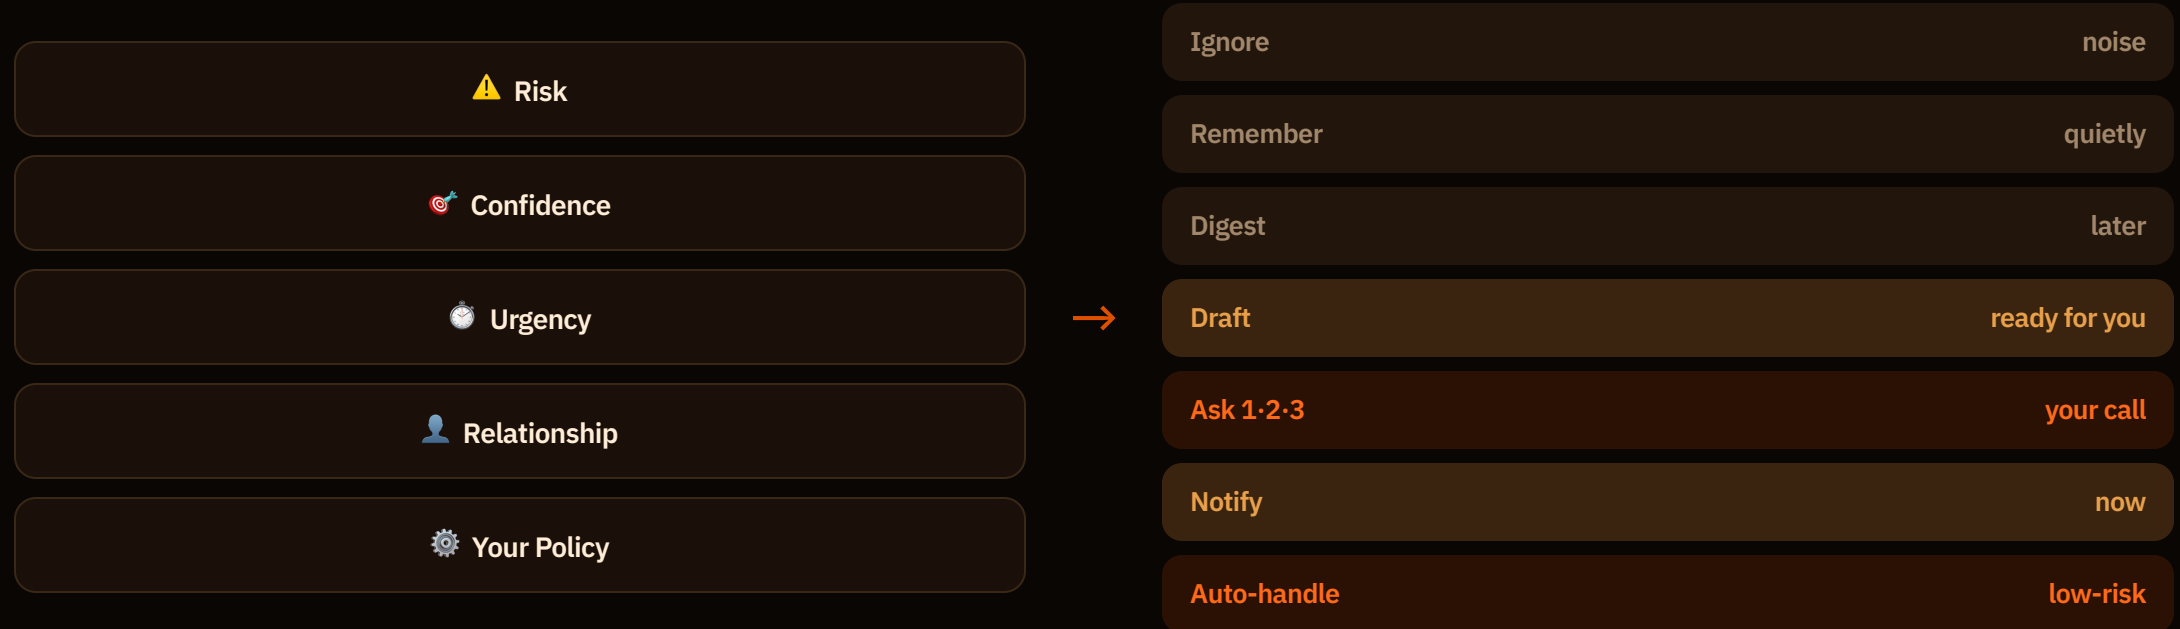

"Got that hallway chat. Saved 2 follow-ups."

ARCA Core

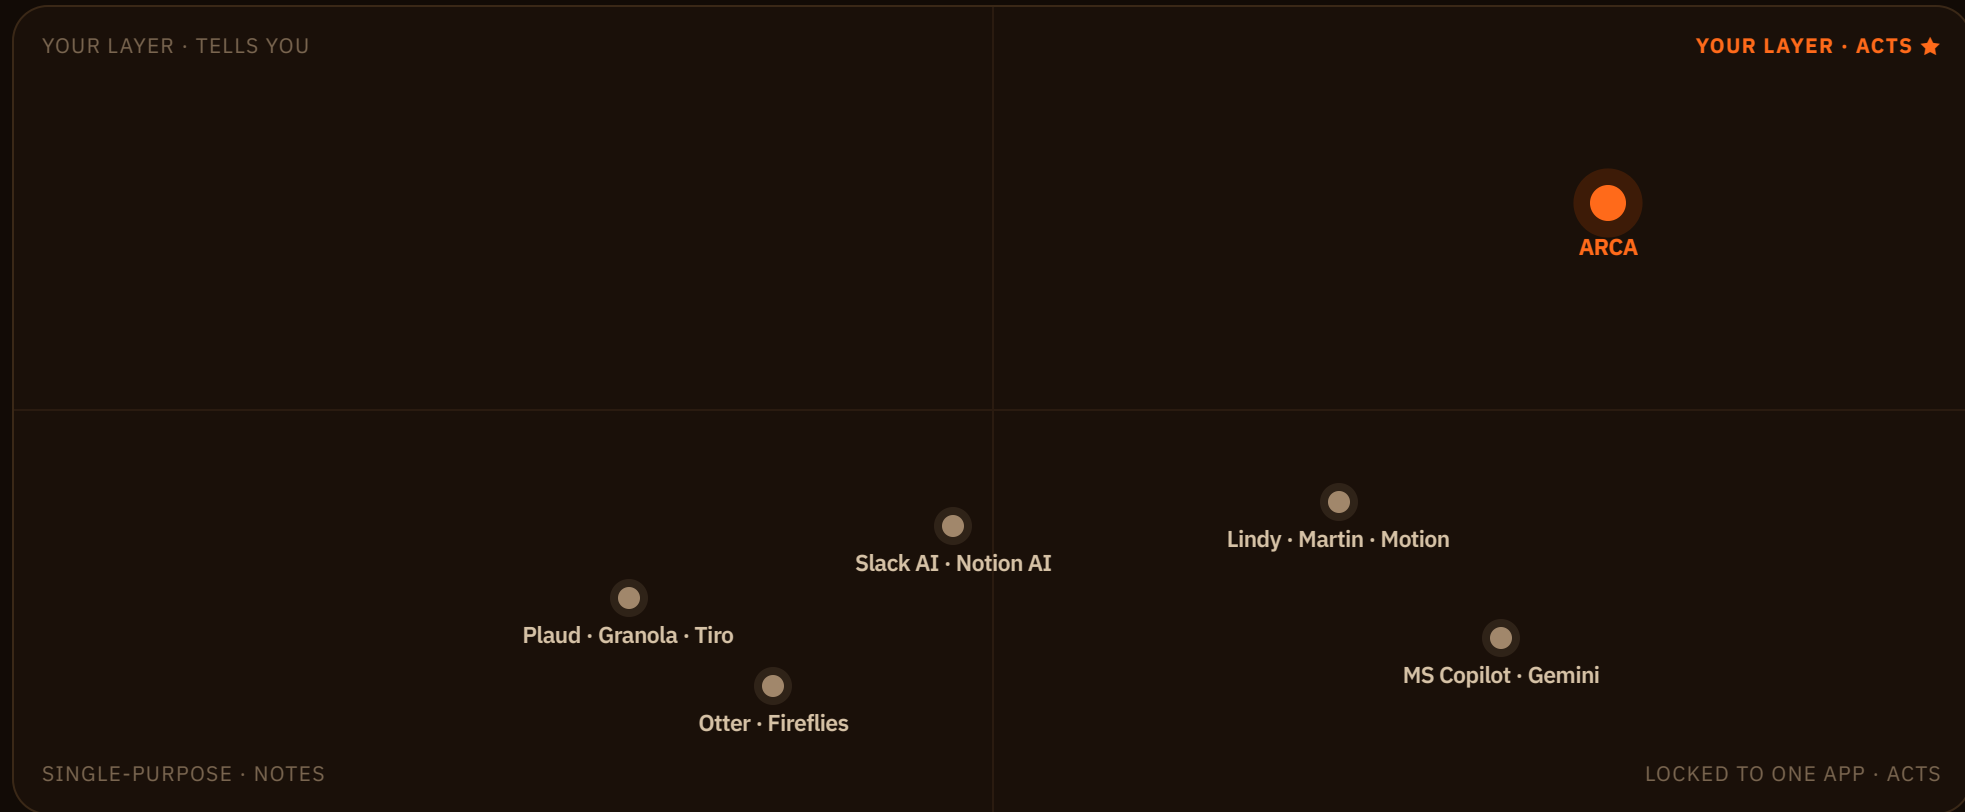

Your second brain that talks back — remembering what matters and quietly doing the rest. **The most helpful friend you've ever had.**

ARCA doesn't notify you about everything. It brings you only the loops that **need your judgment.**

You stop being everyone's inbox. ARCA absorbs the noise, handles what it safely can, and hands you only the few decisions that are **truly yours.**

Everyone else stops at notes. ARCA closes the loop.

Note-takers are the on-ramp we grew out of. ARCA is the only one that **acts**, on **memory you own**, **across every device** — plus a core that captures the real-world conversations none of them reach.

WHY NOW

Three things just became true **at the same time.**

01

AI can finally **act, not just chat.**

Agents and computer-use can do real work now —
safely, with you approving what matters.

02

Your context is the **moat — and you
can own it.**

As big tech buys up every listening device, the
privacy-owned lane sits wide open.

03

Everyone is **drowning in incoming
work.**

57% of the workday goes to communication. People
are desperate for relief.

The model isn't the product — the **connection** is. ARCA wires AI into your real tools,
with you as the supervisor. Built solo by a founder with YC & AWS hackathon wins and
a startup exit.

BUSINESS MODEL

Four ways it compounds.

① Subscription

Transcription minutes + the agent that closes your loops.

Starter · 300 min **\$10/mo**

Plus · 1,000 min **\$15/mo**

Pro · unlimited + agents **\$30/mo**

② Hardware Core

The pocket device that captures real-world conversation — one button, always ready.

\$129 – \$179

Stand Character Keyring

③ Shells & accessories

Swap the body, make it yours — stand, character, keyring. The case, figure & wearable markets in one.

\$19 – \$59

FUTURE

④ Harness Marketplace

Pre-built work-automations — "make the deck", "fill the CRM", "draft the investor update" — that plug onto your memory. Experts sell them; we take a cut.

take-rate

Starts as a memory loop you pay for. Becomes a marketplace where the world's best workflows plug into your brain.

ONE COMPANION, EVERY DEVICE

Your time is precious. Spend it where it matters.

ARCA gives back the hours you lose managing work — across your Mac, phone, watch, and the core in your pocket — so you do the work, and live the life, that's actually yours.

Less managing work. More meaningful work.
